Practical for Distributed and Cloud computing
Group Project

- **Group Name :** Group E

- **Group Leader :** SEU/IS/18/ICT/063

- **Project Name :** FOT Student Management System

- **Group members :**

  - SEU/IS/18/ICT/063
  - SEU/IS/18/ICT/021
  - SEU/IS/18/ICT/012
  - SEU/IS/18/ICT/057

- **Our Group project mechanism that we used** : RMI (Remote Method invoke)

- **The part group members did :**

  - SEU/IS/18/ICT/063

    - ✓ create the part of calculation in GPA, got input from user and mathematical part.

  - SEU/IS/18/ICT/021

    - ✓ create the part of new data adding , got input from user.

  - SEU/IS/18/ICT/012

    - ✓ create the part of data retrieve and classes files

  - SEU/IS/18/ICT/057

    - ✓ create the part of view the subjects.

- **Problems that arrive while we making our project:-**

- ❖ We had problem to use set and get functions
- ❖ Variable declaring , we only use public but finally we had to use static keyword.
- ❖ There was a problem in solving the GPA calculation, after we did search in online
- ❖ We had a problem hot to break the while loop inside the switch case, as for that we found loop:while -> break loop
- ❖ Can break the while.
- ❖ We had lot of misplaced curly brackets problems, for that minimizing parts of the code finally we make it
- ❖ We had problem in returning the menu option
